## Analytical Standards for Flavonoid Analysis

Flavonoids are naturally occurring secondary metabolic products which can have important functions within plants and benefit consumers with health and healing properties.

Many beneficial compounds are metabolites produced as an end product of chemical and biological processes. Metabolites are small molecules that have many functions including defense, pigments, pheromones, odorants and catalysts. Primary metabolites are necessary for plant growth, development and reproduction. Flavonoids are secondary plant, algae or fungus metabolites composed of polyphenolic compounds. Secondary metabolites are not directly involved in critical processes but have secondary functions involving defense and pigmentation.

We offer analytical standards for flavonoid analysis. Contact us at +1.732.549.7144 or [spexsales@antylia.com](mailto:spexsales@antylia.com) to discuss your specific requirements.
